

Rooftop Photovoltaic Systems

Firestone

ENERGY SOLUTIONS

Nobody Covers You Better.

Harness the power of the sun, without getting burned.

Your roofing system is a valuable asset that was designed to perform a critical function – waterproof the top of the building. More than likely, your roof was not designed to become the permanent platform for a heavy photovoltaic (PV) system. Throughout the world, rooftops are turning into solar power systems as building owners attempt to capitalize on the environmental and financial benefits of installing a PV system. The experts at Firestone Energy Solutions will provide a comprehensive roofing and PV installation that minimizes your risk, while maximizing your return on investment.

Trust Firestone to Keep You Protected.

When you work with the professionals at Firestone Energy Solutions, you can be confident that your long-term interests are being protected. We will evaluate your current roofing system and make a comprehensive recommendation for a roofing and photovoltaic system that maximizes your return on investment. Your roof is critical to the operation of your building, and any interruption to that operation can be a disaster. So don't put your rooftop PV system in the hands of someone who cannot address the upgraded requirements of the roof. Trust Firestone to properly manage your PV installation.

What Can You Expect from Firestone? One Solution, Many Options.

Full Line of PV Products, including:

- Crystalline and Thin Film Solar Modules
- Ballasted and Penetrating Solar Racking Systems
- Solar Inverters
- Balance of Systems (BOS) Components
- Solar Monitoring Systems

Custom Solutions, including:

- Financial Analysis
- Details & Specifications
- System Engineering
- Solar Roof Layouts
- Solar and Roof System Contracting
- Solar Service Agreement
- Single Source Point of Contact

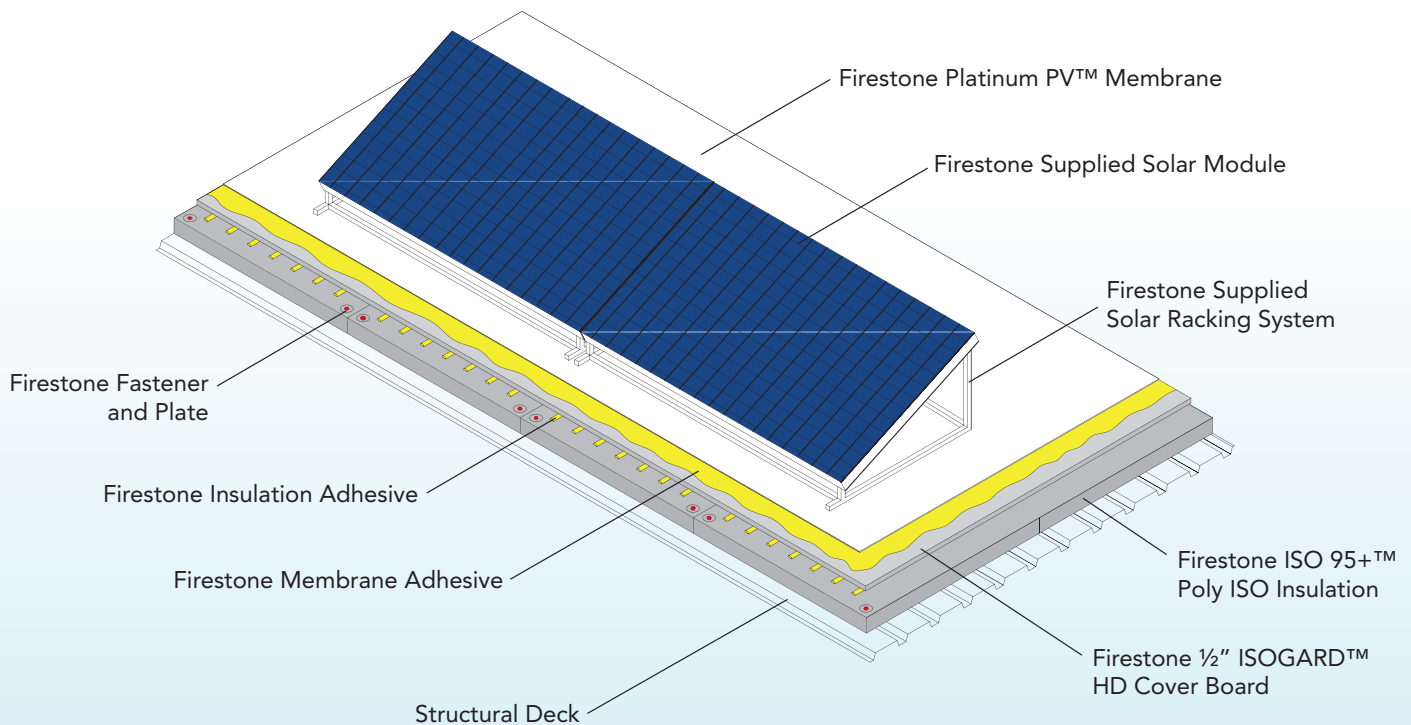

Important considerations **BEFORE** installing a rooftop PV system:

- Will the life of your PV system outlast your roof?
- If your roof needs to be repaired or replaced, who will pay for the removal, storage and replacement of your solar array?
- Has your current roofing system been evaluated for the roof traffic, additional weight and demands of a PV system?
- Have you considered the benefits of involving your roofing professional in the management of your PV installation?

Introducing the Firestone Energy Solutions PlatinumPV™ Program

Rooftop solar is purchased based on a calculated return on investment. The expense of disassembling and moving your solar array for roof maintenance or replacement can destroy your anticipated solar ROI. Protect your investment by starting with a 30-year Firestone PlatinumPV system that is designed to go the distance with your rooftop PV solution.

The Firestone PlatinumPV program provides a comprehensive rooftop solar installation that minimizes your risk, while maximizing your investment. The program provides owners with a choice of a Firestone top-of-the-line Platinum roofing system – select from EPDM, TPO, Asphalt or Metal – combined with a turnkey PV solution, for decades of undisturbed power production and peace of mind.

The Firestone PlatinumPV program comes standard with a 30-year Red Shield® roofing warranty and a 25-year solar module efficiency guarantee. This combination qualifies building owners for our optional Firestone Solar Service Agreement, which alleviates overburden concerns by covering the removal and reinstallation of PV to investigate any warranted roof leaks.
